

Service of machine components and Special devices

RollResearch – Roll Grinding machines

ProCoats – Coating stations & Supervising

ProCoats – Right Blade Angle Service

**ProCoats - Calenders audit and trouble shooting
services**

Calenders audit and trouble shooting

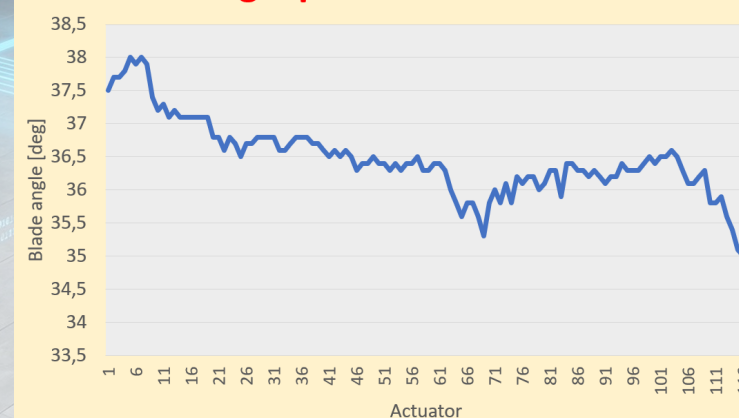

Main needs for process/condition audit, services:

- To identify cross-direction and machine-direction profile problems
- To identify the main maintenance needs.
- To identify runnability problems.
- To check certain actuators in the calender area.
- Loading, deflection-compensated rolls, steam boxes, doctor blades, etc.
- On supercalenders, lifting spindles, possible lightening devices and clearances between the guide and the base parts.
- On Optiload, lightening cylinders for the intermediate rolls.

Right blade angle

We have developed a special tool for blade angle profil measurement for all blade coaters.

Blade angle profile with 1mm load
