Reducing complexity, giving space to innovation, strengthening cooperation

Individual, cooperative, and methodically founded – this is how I provide support to organisations to implement changes in a structured manner.

Your challenges – My solutions

Improve existing processes

Would you like to make your business processes more **efficient**? Are you planning to **automate** process steps, perhaps by implementing **AI**?

„Together we analyse your current processes, develop target models and implement them with appropriate IT support.“

Design new processes

Fundamental **changes** in your organisation? New software, structures or responsibilities?

„I will support you in designing, visualising and testing new business processes – in line with your strategic goals.“

Document established processes

Would you like to document processes in order to secure **knowledge**, increase **transparency** or create **role-based** structures?

„I will help you document your current processes in detail – for knowledge transfer, flexible structures and better collaboration.“

Apply knowledge of process management

Process management should be **practised** throughout your organisation, not only by specialists?

„I offer tailor-made workshops – practical and implementation-oriented.“

Structure digital transformation projects

Do you have digitisation projects in the pipeline? You have the desired end state in mind, but how do you **get started**?

„I will help you plan projects in a process-oriented manner, structure requirements and analyse your initial situation in advance.“

Bridging the gap between business and IT

Do you offer software products and are looking for an additional resource to record **customer requirements** so that you can concentrate on the **technical implementation**?

„I record requirements in a process-oriented manner and create usable process models – for your customers and your technical implementation.“

Your benefits

✓ **Employee satisfaction** – comprehensible responsibilities reduce stress and promote cooperation
✓ **Time savings** – clearly designed processes reduce duplication of work and speed up procedures
✓ **Cost reduction** – achieve your goals effectively and with optimal use of resources
✓ **Knowledge preservation** – process documentation facilitates training and knowledge transfer

Your added value

✓ **Focusing on you** – individual solutions for your organisation
✓ **Applicable results** – practical, implementable solutions
✓ **Confidence & transparency** – clear communication and comprehensible steps
✓ **Your additional resource** – flexible support when and where you need it
