MAEX

PROFESSIONAL SOLUTIONS FOR HORTICULTURE

What is Rolltrap®?

Rolltrap® is a high-quality sticky roll designed for the monitoring and control of a wide range of flying insects in greenhouses and open field crops.

Its highly attractive color and powerful adhesive layer attract and capture insects, reducing pest pressure and supporting Integrated Pest Management (IPM) programs.

Insects it helps to control

Effective against whiteflies, thrips, aphids, leafminers, fungus gnats and other flying insects.

Whiteflies

Thrips

Aphids

Leafminers

Fungus gnats

Other
flying
insects

Available formats

Color	Width (cm)	Length (m)	Rolls per box	Boxes per pallet
	15	80 - 160	8	60

How does it work?

Insects are attracted by the color and become trapped on the adhesive surface.

This reduces pest pressure and allows the grower to monitor population levels and determine the right time to take action.

- ← Strong adhesive power
- ← Excellent visibility
- ← Easy to hang and replace
